low and middle income countries (lmics) are home to diverse populations of livestock species adapted to various agro-ecological zones production systems and harsh environmental conditions however the livestock in lmics have not been systematically improved and current low levels of productivity do not meet the demand for livestock products by a growing population recent advances in next generation sequencing and genotyping technologies have enabled the application of genomic selection in various livestock species in some western countries with great success despite the low adoption of genomic breeding in lmics livestock industry various studies and programs were initiated and some are still ongoing furthermore community based breeding programs (cbbp) have been initiated in many lmics with great benefits for smallholder livestock farmers cbbps are based on the active participation of farmers from inception through to implementation and consider their needs views decisions breeding objectives and available infrastructure in africa for instance small ruminants cbbps have generated substantial genetic gains and socioeconomic benefits for rural poor farmers however the current challenges affecting the data recording and genetic evaluation of the cbbps in lmics are yet to be fully reported furthermore the cbbps are yet to integrate genomic selection in their breeding strategies for sustainable livestock breeding in lmics there is a need to assess the current status of livestock genomics and community based breeding strategies to identify the challenges and suggest mitigating strategies and future improvement strategy plans in this research topic

we aim to collect findings from past and current livestock genomics and community based breeding programs the challenges the lessons learned the opportunities and future perspectives
